SUMMARY

Full-Stack Developer specializing in scalable SaaS, AI-powered, and real-time applications using Next.js, React Native, TypeScript, and modern backend technologies. Experienced in building production-ready platforms including scheduling systems, marketplaces, dashboards, Chrome extensions, and AI-integrated products used by real users. Skilled in AI agent development, frontend architecture, API development, performance optimization, authentication systems, and payment integrations.

SKILLS

Frontend: Next.js, React, React Native, TailwindCSS, Zustand

Backend: Node.js, Express.js, .NET Core, GraphQL, REST APIs

Databases: PostgreSQL, MySQL, Supabase, NeonDB, Firebase, MSSQL

Tools: Git/GitHub, Stripe, Azure DevOps

EDUCATION

Sir Syed CASE Institute of Technology

B-17, Islamabad

Bachelor's In Computer Science (Graduated)

10/2021 - 07/2025

EXPERIENCE

Komatsu Pakistan Soft, Islamabad (Onsite)

01/2026 – Present

Software Developer L1

Job Description:

- Optimized large-scale data table rendering performance using TanStack Table by reducing unnecessary re-renders.
- Resolved full table re-rendering issues caused by row-level state updates, improving UI responsiveness.
- Introduced modern reusable form styles, with one adopted as the standard across the project.
- Worked as a core member of the React/frontend team while also contributing to backend development tasks.
- Developed multiple backend API modules using .NET Core and supported frontend-backend integrations.
- Collaborated on improving overall application performance, maintainability, and user experience.

Tavren, Rawalpindi (Onsite)

09/2024 – 02/2026

Full-Stack Developer (Part Time)

Job Description:

- Built an appointment scheduling system for a home service provider organization that is currently used by 1000+ monthly users.
- Built a SaaS platform with Next.js + Supabase, featuring RBAC and a multi-branch dashboard.
- Built a React Native (Expo) marketplace app for trucker service requests with real-time vendor quotes using Supabase.
- Integrated Stripe escrow payments and Google Location APIs for secure transactions and live tracking.

Silverthread Labs, Islamabad (Onsite)

06/2025 – 11/2025

Junior Full-Stack Developer

Job Description:

- Fixed API fetching bugs and improved UI components, resulting in a smoother and more reliable user experience.
- Refactored and cleaned the codebase by removing unused code, optimizing logic, and improving overall performance.
- Collaborated with a client to develop a Chrome extension that provides clothing size recommendations based on user input.

AlimcoSoft Pvt. Ltd, Islamabad (Onsite)

02/2025 - 04/2025

Junior Full-Stack Developer

Job Description:

- Built scalable web and mobile apps using Next.js, React Native, GraphQL, and TypeScript.
- Developed complex multi-step forms with auto-save features using Apollo Client and GraphQL.
- Integrated Firebase and Supabase for authentication, data storage, and file uploads.

-
- Created full-featured SaaS dashboards and eCommerce apps with role-based access control.
 - Implemented real-time chat support service of Intercom in a React Native app.

Grace Technologies, Rawalpindi (Onsite)

10/2024 - 01/2025

Frontend Developer (Internship)

Job Description:

- Developed responsive web applications using React.js, focusing on real-time tracking and user-friendly interfaces.
- Rebuilt the UI of a mobile tracking app with React.js, Material UI, aligning it with the GTL project's design system.
- Built a book marketplace platform with tutor service features, integrating the React.js frontend with a Node.js backend.

Digital Empowerment Network, (Remote)

07/2024 (1 month)

Frontend Developer (Internship)

Naviquis, Islamabad (Onsite)

06/2023 - 09/2023

Frontend Developer (Internship)

PROJECTS

Appointment Scheduling System (Next.js + GoHighLevel + Google Maps + NeonDB + Drizzle) | ([Link](#))

- Built an scheduling and appointment management system to streamline booking, rescheduling, and user coordination.
- Built a master scheduling calendar for booking appointments showing users only available slots with factors like appointments that day, blocked slots, and consultant availability windows.
- Integrated GoHighLevel (GHL) APIs to automate workflow handling, lead/appointment syncing, and client communication.
- Added client-side caching using Tanstack Query to reduce repeated API calls and improve application performance.
- Developed a consultant dashboard where users can set availability, manage zones, view monthly appointments in a Google Calendar-like interface, and block time slots.
- Created an admin dashboard with full CRUD for consultants, along with centralized access to consultant details, appointments, blocked slots, zones, and availability settings.
- Implemented Google Maps/Google API-based zone creation to define service areas and support location-based operations.
- Designed backend logic to manage real-time appointment updates, availability tracking, and automated notifications.

Parakh (React Native + Expo + Next.js + Groq AI + NeonDB + Drizzle + Better Auth) | ([Link](#))

- Built an AI-powered customer risk profiling platform for digital onboarding that analyzes KYC data across fields and applications to identify potential fraud and compliance risks.
- Developed a deterministic cross-field signal engine combined with a Groq-powered AI risk agent to assign Low/Medium/High risk levels with explainable reasoning.
- Built a React Native (Expo) mobile application with separate applicant and compliance officer flows, including EDD queues, decision history, and application status tracking.
- Developed a Next.js REST API with Better Auth, Neon PostgreSQL, and Drizzle ORM, using TanStack Query for caching and cross-screen data synchronization.

Servis AI (React Native + Next.js + AI Agents + Gemini LLM + NeonDB + Drizzle + Google Maps) | ([Link](#))

- Built an AI-powered service booking platform that converts natural language requests in English, Urdu, and Roman Urdu into automated service matching and scheduling.
- Designed a multi-agent TypeScript pipeline for intent extraction, geocoding, provider ranking, appointment booking, and follow-up notifications.
- Integrated Google Maps APIs to handle geocoding, distance calculations, and location-based provider assignment.
- Developed a Next.js + Expo monorepo with a mobile app, admin dashboard, and backend APIs powered by Neon and Drizzle.

WhatsApp Building Maintenance Dispatch System (Next.js + Groq AI + WhatsApp Cloud API + NeonDB + Drizzle) | ([Link](#))

- Built an AI-powered service booking platform that converts natural language requests in English, Urdu, and Roman Urdu into automated service matching and scheduling.
- Designed a multi-agent TypeScript pipeline for intent extraction, geocoding, provider ranking, appointment booking, and follow-up notifications.
- Integrated Google Maps APIs to handle geocoding, distance calculations, and location-based provider assignment.
- Developed a Next.js + Expo monorepo with a mobile app, admin dashboard, and backend APIs powered by Neon and Drizzle.

Relay (Next.js + better-auth + NeonDB + Drizzle) | ([Link](#))

- Built Project Relay, a simple static email inbox using Next.js 16.
- Used TailwindCSS + shadcn/ui for learning modern full-stack development.
- Implemented authentication with BetterAuth and route protection using middleware.ts (proxy.ts).
- Integrated Neon PostgreSQL with Drizzle ORM for schema definition, migrations, and type-safe queries.

Fit-Fusion (Nextjs + Supabase + Typescript) | ([Link](#))

- Built an AI fitness web app that generates personalized workout and diet plans using KNN-based recommendations.
- Implemented the frontend in Next.js with Supabase for auth, storage, and realtime messages.
- Developed a community feature for sharing workouts.
- Integrated health metric analysis for accurate, goal-based diet recommendations.
- Designed a seamless experience for users to create custom workout plan of their will.

Fleet Companion App (Expo React Native + Supabase + Stripe + Google API)

- Built a service marketplace where truckers post requests and vendors submit quotes in real time.
- Developed an escrow-based payment system using Stripe for secure transactions.
- Integrated Google Location APIs for real-time tracking of trucks and service providers.
- Implemented Supabase Realtime for instant messaging, live quotes, live location handling and continuous request updates.

Size Queen | Chrome Extension (React.js (Vite) + Supabase + Stripe)

- Worked on a Chrome extension using React (Vite) and Supabase that scrapes clothing product pages to extract product size charts and measurements.
- Used OpenAI to analyze user-provided body measurements and generate accurate size recommendations.
- Integrated Stripe subscriptions to manage paid access for users.

EZLY (Next.js + Neon + Drizzle + SWR)

- Optimized codebases by using SWR for efficient API caching and improving UI styling for better user experience.

Device Registration Portal (Next.js + GraphQL)

- Built a stepper-based complex registration form in Next.js using GraphQL and Apollo Client, enabling incremental user data saving and allowing users to resume progress after exiting.
- Used Zustand for state management and local storage to persist the JWT token for user authentication and session continuity.

E-Commerce Store with Chat Support (React Native + Firebase + Intercom)

- Built a mobile e-commerce app using *React Native Expo* and *Firebase* with full CRUD functionality.
- Authenticated users can manage their own products while browsing others.
- Also integrated Intercom chat support in the React Native CLI version to enable real-time customer communication.

School Website & Management System (Next.js + Supabase)

- Developed a school website with an admission form and S3 storage for document uploads.
- Built a full-featured SaaS with Role-Based Access Control (admin, student, teacher) using Supabase to manage applications, enrollments, assessments, fees, and course data.

Book Brary (MERN) | ([Link](#))

- Created a React-based frontend for a book marketplace and tutor services app, with Node.js backend API integration for core features like book sales and tutor listings.
